Please ignore the NAB's petition to stop XM from providing XM Instant Traffic & weather. I pay for XM Satellite Radio because I am fed up with local radio station that are more commercials than they are music or talk. I was tired of local stations promoting their own agenda and liking to hear their own voice. Those people who have chosen satellite radio know that it is superior to local radio. XM's Instant Traffic and weather are not causing radio broadcasters to lose listeners; rather, it is their own programming and excessive commercials that is causing them to lose listeners. As a subscriber to XM, I am not impeding on what local radio can broadcast; nor should they have the opportunity to tell me what I can pay for. Please put the NAB in their place; if they want their listeners back, they need to realize they are in a free market and they need to become more competitive by improving their programming and commercial format. Shouldn't they realize that when people are willing to pay a monthly subscription fee over choosing free radio over the airwaves that they need to do something different? That something different should not be allowing them to impede on what is broadcast over satellite. I strongly oppose HR4026. Thank you for time.
